

SURGE ANTICIPATOR RELIEF **/ REMOTE SENSE**

Used in pumping systems to protect equipment from damaging pressure surges or waves caused by rapid changes of flow within the pipeline. The 203 responds by opening at a preset low pressure setting, allowing for quick relief of the returning high pressure wave. The valve remains open as the integral accumulator is charged and then closes. This prevents possible excess system drainage should pressure not return to/above the low pressure setting. It is also equipped with a high pressure control pilot which allows for high pressure relief service.

TO DRAIN

VALVE FUNCTION

- Senses low pressure condition that precedes high pressure surge and opens to relieve high pressure
- Relieves high pressure build-up and protects system from over-pressure conditions
